

Dear FCC:

Please support the implementation of RM-10352 to legally separate the narrow and wide band communication modes on the 160 meter amateur bands.

I have operated on this band for over 30 years. With the development of newer communication modes it is necessary to assure continued effective operations will remain possible without unnecessary interference due to incompatible modes.

The ARRL has adopted a voluntary band plan which mirrors the "gentleman's" use of the band for years. With this voluntary plan implemented as a regulation, such is done on all other MF and HF bands the use of the band as an effective communications media will be assured for years to come.

Regards,
Charles R. Schwartz W1TE
